

ABSTRACT

An interlabial pad individual wrapping container is presented which facilitates
sanitarily wearing and removing an interlabial pad between the labia of a wearer. The interlabial
5 individual wrapping container can be used as a preferred handling member at the time of wearing
or removing the interlabial pad. Two fingers of the left hand are inserted in the finger insertion
openings formed from the belt body attached on the wrapping container; the wrapping container
is separated into the sections and along the separation part by opening these fingers to the left
and right; and in this state as it is, the action for wearing the interlabial pad is performed.
